

Capstone Project on Agentic AI

Project Title

CampusAI Lite – Agentic University Information Assistant

1. Problem Statement

Develop an Agentic AI application that assists students by answering university-related queries using multiple AI agents, custom tools, and an intelligent workflow.

**Note: -Each student will independently develop a multi-agent AI assistant that answers university-related queries using AI agents, custom tools, workflows, and one or more agentic frameworks.*

2. Mandatory Requirements

Framework Implementation

CrewAI

LangChain

LangGraph

AG2 (AutoGen)

PydanticAI

Docling

BeeAI

3. Tasks

Part A (Core Implementation)

Build **CampusAI Lite** using:

- CrewAI
- LangChain
- LangGraph (or ReAct)

Features:

- Planner Agent
- Information Agent
- Validation Agent
- One Custom Tool
- Gradio UI

Part B (Framework Exploration)

Students must explore with these two options of additional framework.

Option 1

Implement the same workflow using **AG2 (AutoGen)** and compare it with CrewAI.

Option 2

Implement **BeeAI** by building a small proof of concept (for example, a simple two-agent workflow) and compare its developer experience with CrewAI or AutoGen.
